Summary

AI & Software Engineer passionate about building intelligent automation tools. Specializes in integrating local large language models, computer vision, and machine learning pipelines into modern web and mobile applications to solve complex, data-heavy challenges.

Projects

Qaima (قائمة) – Multi-Tenant Restaurant SaaS | Live: <https://qaima.info>

Tech Stack: React, TypeScript, Tailwind CSS v4, Supabase (PostgreSQL, RLS), Vite

- Architected and deployed a **multi-tenant B2B SaaS platform** that enables restaurants to transform traditional paper menus into optimized, mobile-first QR web applications featuring real-time updates and WhatsApp ordering.
- Engineered **secure data isolation** using Supabase PostgreSQL with Row-Level Security (RLS), custom RPC functions, and JWT authentication to maintain integrity across diverse merchant accounts.
- Developed a comprehensive **merchant portal** with live menu management, vector QR code generation, dynamic branding options, and an administrative dashboard for monitoring business metrics and subscriptions.

Comprehensive Restaurant POS & ERP Infrastructure

Tech Stack: React, TypeScript, Electron, Node.js, Express, Prisma, PostgreSQL, Supabase, Tailwind CSS

- Engineered a robust, **offline-first POS architecture** facilitating table management, delivery dispatch, and complex dual-currency split-tender transactions.
- Implemented **multi-terminal LAN synchronization** with granular role-based access controls and comprehensive shift management for optimized staff workflows.
- Developed advanced **inventory and financial modules** featuring recipe-level deduction, automated purchase orders, payroll processing, and operational Z-Reports.
- Built a cloud-powered **license verification system** utilizing cryptographic HWID locking via Supabase to ensure secure software activation and device security.

AI-Powered Hybrid Resale Platform (Final Year Project)

Tech Stack: React, TypeScript, Node.js, Express, Prisma, PostgreSQL, MobileNetV2, Linear Regression

- Developed a **hybrid resale system** integrating a React Native mobile app, React admin dashboard, and physical store workflow.
- Implemented **AI-based product category classification and price prediction** using TensorFlow and ONNX.
- Built a **Node.js (TypeScript) backend** with PostgreSQL for secure, scalable data management.
- Enabled item tracking, package management, delivery requests, and sales monitoring.

Education

Lebanese International University
Bachelor of Science in Computer Science

Beirut
2022-2026

Skills

Programming Languages: Python, Java, TypeScript, JavaScript, Dart, SQL

Backend Development: Node.js, Express.js, FastAPI, RESTful API design, Prisma ORM, and Secure Authentication (JWT)

Frontend & Mobile: React, React Native, Tailwind CSS, Vite, and Electron

AI & ML: TensorFlow, Scikit-learn, RAG architectures, LLM integration, Computer Vision (MobileNetV2), and ONNX

Database Systems: PostgreSQL, MySQL, SQLite, Supabase, and Vector Search (FAISS)

Tools & DevOps: Git, Docker, Linux, Jupyter, VS Code, and Data Visualization (Matplotlib, Seaborn, Plotly)

Languages

English: Full professional proficiency | **Arabic:** Native | **French:** Basic
